Appendix K: CrossOver for the Mac

CrossOver is a program that allows you to run many popular Windows programs on a Macintosh without installing the Windows operating system. The Himalayan Database is compatible with CrossOver and may be used with CrossOver on your Mac.

CrossOver is published by CodeWeavers and is available from their web site

www.codeweavers.com

You can download a free trial version of CrossOver to test with the Himalayan Database to determine if it fits your needs. The current version, CrossOver 24, requires OS X 10.15 (Catalina) or higher through macOS 15 (Sequoia). If you are running OS X 10.14 (Mojave) or earlier, you will need to contact the vendor to obtain earlier versions of CrossOver.

CrossOver now supports Apple silicon Mx Macs and remains compatible with the Himalayan Database.

Installing and Running CrossOver from a Pre-Built Bottle

Download either the trial or your purchased version to your Mac from

www.codeweavers.com

Decompress the downloaded *crossover-24.x.zip* file and drag the resulting CrossOver program into your Applications folder on your Mac. You may then add the CrossOver program your dock if desired by dragging the CrossOver icon from your Applications folder to the dock.

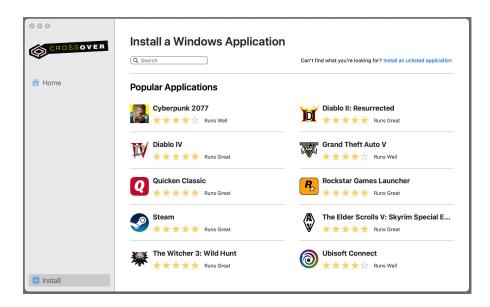

Follow the steps below to install the Himalayan Database:

(1) Download Himal.carchive from the Himalayan Database web site at:

www.himalayandatabase.com/crossover.html

to your desktop.

(2) Launch the CrossOver program:

Since you will be installing a pre-built bottle containing the Himalayan Database, do not use the "Install a Windows Application" entry form, but instead choose the "Import Bottle Archive..." command from the Bottle menu (while leaving the main CrossOver window open):

A bottle is a container that provides the Windows services to the applications that run under CrossOver. CrossOver supports several Windows operating systems such as Windows XP, Windows 7, 8, 10 or 11, all of which work equally well with the Himalayan Database. The Himalayan Database currently uses Windows 10.

(3) When the Import Bottle window appears, navigate to the Himal.carchive file on your desktop and click on the Restore button.

Favorites			Restore Bottle Archive		
Applications		<>>) (□ •) (□ •) (□	Desktop	Q Search	
Desktop					
Documents		Name	Size	Kind	Date Added
Ownloads		Himal.cxarchive	157.3 MB	CrossOArchive	Dec 11, 2023 a

A Notwork					

When the second Import Bottle window appears, click on the Create button:

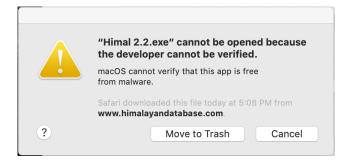

New Bottle Name:	Himal
Restoring from archive:	🛅 xhimal > 🔁 Desktop > 🗎 Himal.cxarchive
	Cancel Create

CrossOver will create the Himal bottle (this may take a few seconds). After the bottle is created, the main CrossOver window reappears:

CROSSOVER	Himal	Bottle Type: Windows 10 64-bit Status: Ready
🏠 Home		2 Run Command
BOTTLES	Himal 2.7	BOTTLE ACTIONS
Himal	Himal 2.7	Gen C: Drive
		Install Application into Bottle
		Quit All Applications
		Delete Bottle
		ADVANCED SETTINGS
		D3DMetal
		DXVK
		DXVK DXVK
		High Resolution Mode
		CONTROL PANELS V
		Wine Configuration
🛨 Install		문과 Game Controllers
		Circulate Debest

After the installation is completed, double-click the "Himal 2.7" icon in the main CrossOver window to start the Himalayan Database.

The first time you try to run the Himal program (or save the command to the Launcher), you may get the following message:

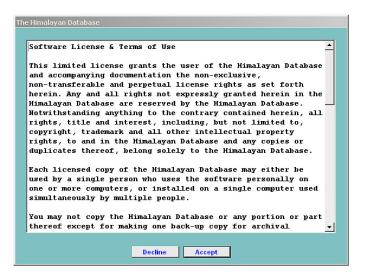

Open the Security & Privacy panel in the Apple System Settings, unlock the panel and click the Allow Anyway button for permitting Himal 2.7.exe.

	Security & Privacy	Q Search
Genera	al FileVault Firewall Privacy	/
	immediately > after sleep or scr nen the screen is locked Set Lock	een saver begins
Allow apps downloaded fro App Store App Store and ident	tified developers	
"Himal 2.2.exe" was blocke identified developer.	d from use because it is not from a	n Allow Anyway
Click the lock to prevent furthe	er changes.	Advanced ?

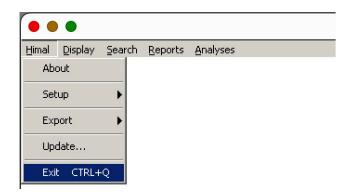

This scenario may be repeated for the VFP9R.DLL and VFP9ENU.DLL library files in future launches. Follow the same procedure outlined above.

Then click the "Run" button to launch the Himal program.

You will be asked to accept the Himalayan Database software license the first time you run the program.

When you want quit the Himalayan Database and exit CrossOver, first select the Exit command from the Himal menu in the Himalayan Database:

If you exit CrossOver directly without first exiting the Himalayan Database, you will get the following error message.

Click "OK" and then follow the correct sequence described above.

(4) Save the Himalayan Database folder location for future use if you wish to directly install newer versions of the Himal program or updated versions of the HIMDATA folder (creating an alias and moving it to your desktop is an ideal way to do this). The Himalayan Database folder is located by following the path: *your-hard-drive-name*->Users->*your-username*->Library->Application Support->Crossover-> Bottles->Himal>drive_c>Himalayan Database

You may also create a separate desktop alias for the installed Himal 2.7.exe for future use in running the Himalayan Database directly from your desktop.

Installing and Running CrossOver by Creating a New Bottle

Download either the trial or your purchased version to your Mac from

www.codeweavers.com

Decompress the downloaded *crossover-24.x.zip* file and drag the resulting CrossOver program into your Applications folder on your Mac. You may then add the CrossOver program your dock if desired by dragging the CrossOver icon from your Applications folder to the dock.

Follow the steps below to install the Himalayan Database:

(1) Download HimalXOvr.zip from the Himalayan Database web site at:

http://www.himalayandatabase.com/crossover.html

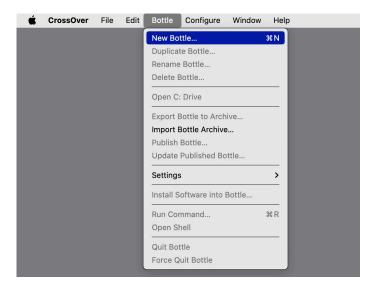

and decompress it to your desktop (resulting in the HimalXOvr folder appearing on your desktop).

		HimalXOvr

😑 Install		

Since you will be manually installing the Himalayan Database, do not click the "Install a Windows Application" button, but instead choose the "New Bottle..." command from the Bottle menu (while leaving the main CrossOver window open):

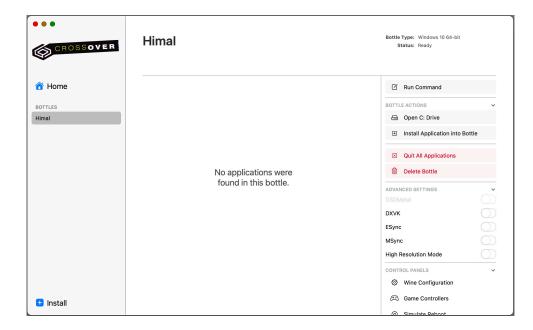

A bottle is a container that provides the Windows services to the applications that run under CrossOver. They support several Windows operating systems such as Windows XP, Windows 7, 8, 10 or 11. Windows XP or later is sufficient for the Himalayan Database.

(3) When the New Bottle window appears

New Bottle Name:	Himal	
New Bottle Type:	Windows 10 64-bit	٢
		Cancel Create

enter "Himal" as the new bottle name, select Windows 10 64-bit as the bottle type (the default) and click the Create button.

(4) CrossOver will create the Himal bottle (this may take a few seconds). After the new Himal bottle is created, the main CrossOver window reappears with the Himal bottle listed in the left column:

(5) Quit the CrossOver program.

Save the Himalayan Database folder location for future use if you wish to directly install newer versions of the Himal program or updated versions of the HIMDATA folder (creating a desktop alias is an ideal way to do this).

You may also create a separate desktop alias for the installed Himal 2.7.exe for future use in running the Himalayan Database directly from your desktop.

The HIMDATA folder that you installed contains data through the latest seasons, so only future updates need to be applied.

(6) After installation is completed, restart CrossOver, select the Himal bottle and click the "Run command" in the right column of the main CrossOver window:

CROSSOVER	Himal	Bottle Type: Windows 10 64-bit Status: Ready

The first time you try to run the Himal program (or save the command to the Launcher), you may get the following message:

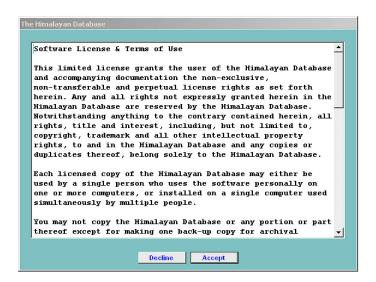

Open the Security & Privacy panel in the Apple System Settings, unlock the panel and click the Allow Anyway button for permitting Himal 2.7.exe.

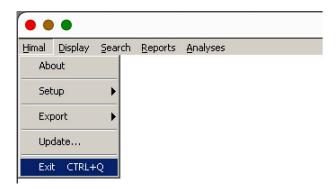

This scenario may be repeated for the VFP9R.DLL and VFP9ENU.DLL library files in future launches. Follow the same procedure outlined above.

Then click the "Run" button to launch the Himal program.

You will be asked to accept the software license the first time you run the program.

When you want quit the Himalayan Database and exit CrossOver, first select the Exit command from the Himal menu in the Himalayan Database:

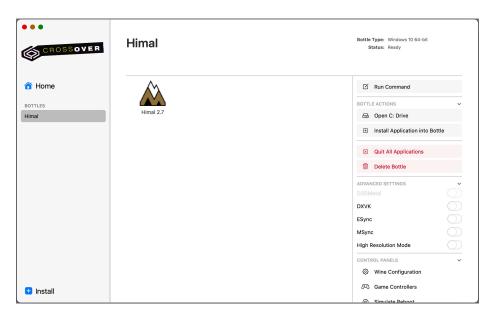

If you exit CrossOver directly without first exiting the Himalayan Database, you will get the following error message.

Click "OK" and then follow the correct sequence described above.

For future sessions of using the database, you may either select the "Himal 2.7" item from the main CrossOver screen, or double-click your desktop alias, if you created one in Step (5).

Restoring the Original Himalayan Database Color Scheme

Some versions of CrossOver may use a different scheme for rendering the colors of the Himalayan Database, e.g.:

Printing PDFs from CrossOver

Printing PDF files from CrossOver requires the installation of the PDFwriter_for_Mac software in your Macintosh system. Download the PDFwriter installer package from the Himalayan Database web site at:

www.himalayandatabase.com/crossover.html

Decompress it, double-click on the PDFwriter_for_Mac_1.2.1.dmg icon to mount it and then run the Lisanet PDFwriter installer.

	💝 Install Lisanet PDFwriter
	Welcome to the Lisanet PDFwriter Installer
 Introduction License 	You will be guided through the steps necessary to install this software.

The PDF-output is written to the PDFwriter folder in the Users Shared folder and is given a generic file name such as "job_3 peakdead.pdf."

You can rename your PDF-output file to better match its contents. Also you may want to create a desktop alias for the PDFwriter folder and rename that to "PDFwriter PDFs" or something else to your liking.

Saving Excel Files in CrossOver

When saving Excel files (or any other type of file), a recommended practice is to save them to the Macintosh desktop so that they can be easily accessed. In the "Save As" dialog box, scroll down and select "My Mac Desktop" and then click the "Save" button.

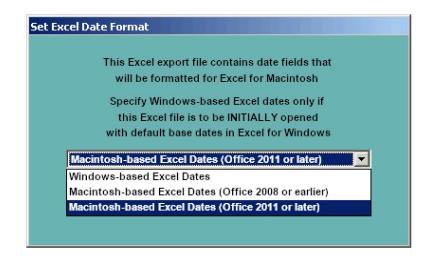

• • •			Save As				
Save in: Desktop Documents My Computer	Himalayan Da Desktop My Compute drive_c (C Himalaya Documents / My Mac Des	er :) Database	~

Save in: Desktop Documents	Appdx K - Nev	w Screenshots]		Save	
Save in: Desktop Documents	Appdx K - Nev	w Screenshots 2022 Updates					

Saving a report to an Excel file poses a special problem when going crossplatform from Windows to Macintosh (or vice-versa) due to the fact that Excel for Windows and Excel for Macintosh use different Julian base dates in date fields. For Windows, the Julian base date of 1 is Dec 30, 1899 while for Macintosh the Julian base date of 1 is January 1, 1904 (the two versions occur because they use differing strategies to account for the fact that 1900 was not a leap year).

Normally, Excel handles this properly if a Windows-export is first opened by Excel for Windows and a Mac-export is first opened by Excel for Macintosh. Once opened, the file is properly marked so that date fields in subsequent openings of the file are properly handled regardless of which version of Excel is used.

But when saving Excel files from a Windows program run under CrossOver, most likely you will be first opening the file using Excel for Macintosh. Thus the date fields may be incorrect (off by 1462 days) unless adjusted for if you are using default base dates in Microsoft Office 2008 or earlier. The Himalayan Database allows you to compensate for this by selecting "Macintosh-based Excel Dates" in the following dialog window that appears when you save the file.

Further information about Excel base dates and how to compensate for their differences may be found by doing a Google search for "Excel base dates."

Updating the Database

Periodic updates to the Himalayan Database will be issued via the Internet at

www.himalayandatabase.com

These updates will add records for new expeditions and corrections and additions to records for previous expeditions.

For users running the Himalayan Database with CrossOver on a Macintosh, the instructions are similar to those running on Windows.

First download the compressed update package from the website *onto the desktop of your Macintosh* and decompress it by double-clicking on the update package. The result of the decompression is a folder with a name similar to "Himal Spring 2023 Updates" containing 14 update files:

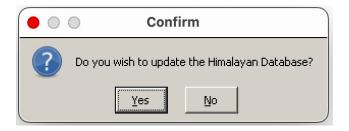

expchgs.dbf	memchgs.fpt	refer.cdx
expchgs.fpt	memchgs.cdx	peaks.dbf
expchgs.cdx	memlog.dbf	peaks.fpt
explog.dbf	refer.dbf	peaks.cdx
memchgs.dbf	refer.fpt	

The files of the form "exp..." and "mem..." contain the changes to be applied to the EXPED and MEMBERS tables. The files of the form "refer..." and "peaks..." are replacement files for the current files in the Himalayan Database.

Start the Himal program and use the **Update** command in the **File** menu to apply the updates to the Himalayan Database.

	•			
Himal	Display	Search	<u>R</u> eports	Analyses
Abo	out			
Set	up	•		
Exp	oort	•		
Upo	late			
Exil	: CTRL+	-Q		

Confirm that you wish to proceed with the update:

The Select Expedition Update File dialog screen will appear:

• • •	Select	Expedition Upd	ate File (exp	chgs.dbf)		
Look in:	📄 Himalayan Da	tabase	 A 			
Desktop	FOXUSER.DBF	:				
Documents						
My Computer						
	Select expchgs				~	ОК
	Files of type:	Table/DBF			~	Cancel
						⊆ode Page

Navigate to the My Mac Desktop folder, which should appear below "himalayan database":

	Select	Expedition Up	date File	e (expc	hgs.dbf)		
Look in:	🛅 Himalayan Da	atabase	~	👍 🛙	2 📄		
	Desktop	er	-				
Desktop	drive_c (C						
	Documents						
Documents	📙 My Mac Des	iktop					
My Computer							
	Calastana da a						
	Select expchgs					~	ОК
	Files of type:	Table/DBF				\sim	Cancel
							⊆ode Page

or if it not visible, navigate to and select "Desktop" above it and then select the My Mac Desktop folder:

• • •	Select	Expedition	Update Fi	le (exp	chgs	.dbf)				
Look in: Desktop	Himalayan Da	tabase r) n Database	~							
My Computer										
	Select expchgs						\		ОК	
	Files of type:	Table/DBF					<u></u>		Cancel	
								[<u>C</u> ode Page	

	Select	Select Expedition Update File (expchgs.dbf)					
Look in:	🞑 Desktop		~ 				
Desktop Documents My Computer	My Computer Documents	op					
	Select expchgs						
						ОК	
	Files of type:	Table/DBF			\sim	Cancel	
						⊆ode Page	

Then navigate to the current Himal Updates folder:

• • •	Select	Select Expedition Update File (expchgs.dbf)					
Look in:	hy Mac Deskt	🖿 My Mac Desktop 💿 🛧 🖾 💼 🗄 🏢					
Desktop		Appdx K - New Screenshots Himal Autumn 2022 Updates					
Documents							
My Computer							
	Select expchgs			\sim	ок		
	Files of type:	Table/DBF		~	Cancel		
					Code Page		

After you have selected and opened the Himal Update folder, select the first file named "expchgs.dbf" and click the **OK** button in the dialog box.

	Select	Expedition Up	date File (e	xpchgs.dbf)	
Look in:	🛅 Himal Autumn	2022 Updates	✓ 4	🖾 🚞		
Desktop Documents My Computer	expchgs.DBF explog.DBF memchgs.DBF memlog.DBF peaks.DBF refer.DBF					
	Select expchgs					
		expchgs.DBF				ОК
	Files of type:	Table/DBF			~	Cancel
						⊆ode Page

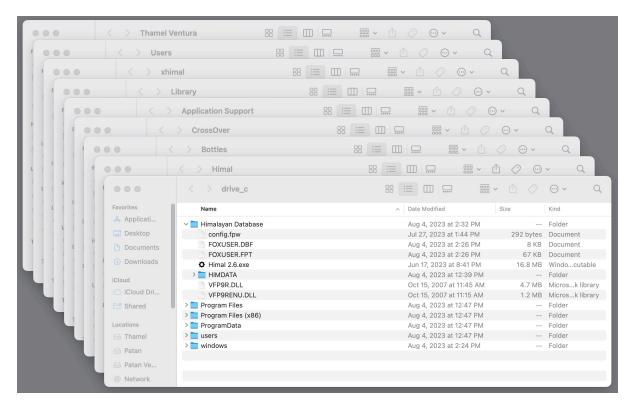

All remaining update files are loaded automatically during the update process.

Confirmation messages are given that each of the four tables (expeditions, members, literature references, and peaks) has been updated.

Replacing Components of the Database

The entire Himalayan Database folder that is nestled inside of the CrossOver application in the Application Support folder may be replaced at the drive_c level if both the Himal program and the HIMDATA folder need to be updated. The Himalayan Database folder is located by following the path:

A replacement Himalayan Database folder for CrossOver is contained in HimalXOvr.zip and may be downloaded from the Himalayan Database web site at:

www.himalayandatabase.com/updates-xovr.html

Individual components of the Himalayan Database such as the Himal program or the HIMDATA folder may be replaced by copying their newer versions into the Himalayan Database folder at the drive_c level.

If you replace the Himal program, you will need to re-activate it by selecting the Run command from the CrossOver main window (as described above).

Showing the User Library Directory Permanently

The User Library directory is hidden by default since most users never need to access it.

For temporary access to the Library directory, hold down the Option key when clicking on the Go menu in the Apple Finder and then select Library.
